

PROTECT-A-BED ENCASEMENTS ALLERZIP SMOOTH WITH BUG LOCK!

To Whom It May Concern:

When bed bugs are found we encase the mattress and box springs in the infested home, apartment etc. even if old bedding is thrown out and new bedding is brought in. We recommend encasing all beds infested or not. Bed bugs are cryptic agile insects that feed at night, and hide during the day. They are excellent hitchhikers that can go unnoticed for months. Bed bugs are attracted to areas where people sleep or sit for long periods of time, and like to harbor in tufts, folds. Most people sleep 6 to 8 hours a day making the mattress and box springs a favorite place to hide. Encasing the mattress and box springs will eliminate harboring areas we cannot see and make the bed bugs easier to find. Protecta-a-bed encasements are escape proof and bite proof, and must remain on for a period of one year because bed bugs can survive for one year without a meal. Remember the more bed bugs we find the quicker we can start our control efforts. When installing these encasements care must be taken around staples and bed frame to prevent holes or rips. Often times heavy duty tape or felt is used to pad areas of the bed frame and box springs. Attached is a price list for Protect-A-Bed Encasements with Bug Lock. ***Remember not just any encasement will seal in/out bed bugs.***
